Education

Manipal Institute of Technology **2022 – 2026**
Bachelor of Technology in Computer Science and Engineering; CGPA: 8.65/10 *Manipal, Karnataka*

Experience

AI Analyst **Jan 2026 – Present**
Impact Analytics *Bengaluru, Karnataka*

- Own the development and validation of an end-to-end pricing and demand-forecasting pipeline for a global luxury jewellery retailer across 13 geographic clusters, using Python and BigQuery SQL to transform large-scale transactional data into reliable modelling inputs.
- Build and evaluate approaches spanning store clustering, demand classification, baseline demand, seasonality, price elasticity, promotions, and markdowns; validate performance at product and fiscal-week levels and trace upstream/downstream exceptions through hierarchy-level alerts, Tableau, and Excel.

Software Engineering Intern **May 2025 – Jul 2025**
YES BANK *Mumbai, Maharashtra*

- Modernized a conversational tool by migrating its Python–Streamlit monolith to Next.js and TypeScript, with Azure OpenAI responses streamed over SSE.
- Implemented JWT authentication and RBAC, and built SQLite-backed bulk-user provisioning with concurrency-safe transactions and rollback integrity.
- Led a three-intern QA effort across three enterprise platforms; delivered SharePoint sites, Power Automate workflows, and Power BI dashboards for operational reporting and stakeholder reviews.

Machine Learning Engineer Intern **Dec 2024 – Jan 2025**
Alethe Labs *Gurugram, Haryana*

- Developed a client-facing multi-head-attention ResUNet for four-class corrosion-condition segmentation of infrastructure imagery—severe corrosion, bad, fair, and background—and implemented unsupervised anomaly detection to identify suspicious patterns in unlabelled banking transactions.

Projects

- **SetuAI – AI-Powered Vendor Compliance Platform**: Built a React, Node.js, and PostgreSQL platform combining Gemini OCR, government API validation, role-based workflows, and risk scoring, reducing vendor onboarding time by approximately 70%.
- **Realtime Anomaly Engine**: Built an asynchronous FastAPI service using Redis Streams, PostgreSQL, WebSockets, and Docker to ingest validated metrics, score anomalies with a z-score cold start and Isolation Forest, persist flagged events, and stream live alerts.
- **LEDA – Local-First Personal AI and Agentic Computing System**: Built a private second brain with OpenClaw-powered agentic workflows, a TypeScript terminal coding agent that inspects local project files through validated tools, and a SwiftUI watchOS voice assistant that streams audio through a WebSocket bridge. Filesystem and audio operations remain local, with model calls limited to reasoning steps.

Technical Skills

Languages: Python, TypeScript, JavaScript, SQL, Swift, Java, C
Technologies/Frameworks: Azure OpenAI, BigQuery, PostgreSQL, SQLite, Redis Streams, FastAPI, Docker, PyTorch, TensorFlow, Next.js, React, Node.js, REST APIs, WebSockets, SSE, JWT, RBAC, Git, Tableau, Power BI, DBeaver, SharePoint, Power Automate

Leadership & Achievements

- **SAP Hackfest'25 – Special Award**: Ranked in the top five among 25,000 students and 4,000 teams across 20 state hubs for developing SetuAI.
- **IAESTE Manipal**: Served as an LC member and helped organize Namaste Manipal'23, a week-long flagship programme welcoming international interns.
