Experience

AI Analyst

Jan 2026 – Present

Impact Analytics

Bengaluru, Karnataka

- Develop and validate pricing and demand-forecasting pipelines for a global luxury retailer across 13 geographic clusters, using Python, BigQuery SQL, and DBeaver to prepare aggregated transactional data and reliable modeling inputs.
- Research and implement approaches for store clustering, baseline prediction, seasonality, and price elasticity across product hierarchies; evaluate outputs at product and fiscal-week levels.
- Build hierarchy-level alerts and perform recurring QA and QC in Tableau and Excel, tracing data and model exceptions across upstream and downstream tables.

Machine Learning Engineer Intern

Dec 2024 – Jan 2025

Alethe Labs

Gurugram, Haryana

- Developed and evaluated a ResUNet computer-vision model with multi-head attention to segment infrastructure imagery into severe corrosion, bad, fair, and background classes.
- Implemented unsupervised anomaly-detection approaches for fraudulent bank transactions, preparing datasets and analyzing suspicious behavioral patterns without labeled outcomes.

Software Engineering Intern

May 2025 – Jul 2025

YES BANK

Mumbai, Maharashtra

- Led a three-person intern team through end-to-end QA of three enterprise platforms, documenting 50+ defects and validating approval workflows across multiple decision paths.
- Built and enhanced SharePoint and Power Automate workflows, internal sites, and Power BI dashboards for operational reporting and stakeholder presentations.

Projects

- **SetuAI – Vendor Compliance Platform:** Built a full-stack SaaS platform using React, Node.js, PostgreSQL, Gemini OCR, government API validation, role-based dashboards, and risk scoring to streamline vendor onboarding and compliance review.
- **Art Generation with Neural Style Transfer:** Built a deep-learning image-generation workflow using a pre-trained VGG-19 convolutional network to transfer low- and high-level visual features into Impressionism-inspired artwork.
- **Analysis of the Fractal Nature of Lyrical Verses:** Analyzed and visualized lyrical patterns using BERT, Word2Vec, Doc2Vec, NLTK, Matplotlib, and Plotly; explored transformer-based lyric generation with Hugging Face models.
- **NearHere – Privacy-Aware Mobile Platform:** Developed a React Native and Supabase application with phone authentication, row-level security, authorized RPCs, and 39 unit tests for domain and parser rules.

Achievements

- **SAP HANA Special Award – SAP Hackfest 2025:** Received a special award for SetuAI after placing in the top five among 4,000 teams.

Technical Skills

Languages: Python, SQL, JavaScript, Java, C

Machine learning: Time-series forecasting, clustering, anomaly detection, CNNs, neural style transfer, NLP, BERT, Word2Vec, Doc2Vec

Data and engineering: BigQuery, PostgreSQL, Supabase, DBeaver, Tableau, Power BI, Git, REST APIs

Frameworks and tools: TensorFlow, PyTorch, Hugging Face Transformers, React, Node.js, Matplotlib, Plotly

Education

Manipal Institute of Technology

2022 – 2026

Bachelor of Technology in Computer Science; CGPA: 8.65

Manipal, Karnataka
