

ANSHUMAN

Software Engineer - Systems and Machine Learning

+91-6205590392 | anshuwont@gmail.com | ansh0eman.xyz | github.com/ansh0eman | linkedin.com/in/anshuman

Bengaluru, India | Open to relocation to Galway | Requires employment sponsorship

Experience

AI Analyst

Jan 2026 – Present

Impact Analytics

Bengaluru, Karnataka

- Develop and validate Python and BigQuery SQL pricing and demand-forecasting pipelines across 13 geographic clusters, transforming transactional data into reliable modeling inputs.
- Implement store-clustering, baseline, seasonality, and elasticity approaches; trace data and model exceptions across upstream and downstream tables using DBEaver, Tableau, and Excel.

Software Engineering Intern

May 2025 – Jul 2025

YES BANK

Mumbai, Maharashtra

- Led a three-person intern team through end-to-end QA of three enterprise platforms, documenting 50+ defects and validating approval workflows across multiple decision paths.
- Built SharePoint and Power Automate workflows, internal sites, and Power BI dashboards for operational reporting and stakeholder review.

Machine Learning Engineer Intern

Dec 2024 – Jan 2025

Alethe Labs

Gurugram, Haryana

- Developed and evaluated a ResUNet computer-vision model with multi-head attention to segment infrastructure imagery into four corrosion-condition classes.

Undergraduate NLP Research Intern

Jun 2024 – Jul 2024

Manipal Institute of Technology

Manipal, Karnataka

- Analyzed lyrical structure using BERT, Word2Vec, and Doc2Vec embeddings and visualized recurring patterns for research exploration.

Selected Projects

- **LEDA - Realtime watchOS Voice Assistant:** Built a Swift/SwiftUI and AVFoundation prototype that streams microphone audio over WebSockets to a Node.js bridge and plays streamed responses on Apple Watch. Converted Watch Float32 audio to 24 kHz PCM16 and implemented listen/speak state transitions that pause capture during playback.
- **Realtime Anomaly Engine:** Built a Python event-processing service with FastAPI, Redis Streams, PostgreSQL, and Docker; used asynchronous stream ingestion for anomaly scoring, persisted flagged events, and exposed results through REST endpoints.
- **SetuAI - Vendor Compliance Platform:** Built a React, Node.js, and PostgreSQL platform with Gemini OCR, government API checks, role-based dashboards, and risk scoring. Placed in the top five among 4,000 SAP Hackfest 2025 teams and received a special award.

Technical Skills

Languages: C, Java (OOP), Python, Swift, JavaScript/TypeScript, SQL

Systems and backend: Linux, Git, REST APIs, WebSockets, FastAPI, Node.js, Redis Streams, Docker

Data and ML: PostgreSQL, BigQuery, PyTorch, TensorFlow, Hugging Face Transformers, Tableau

Coursework: Data Structures and Algorithms, OOP, Operating Systems, Computer Architecture, Embedded Systems, DBMS

Education

Manipal Institute of Technology

2022 – 2026

Bachelor of Technology in Computer Science and Engineering; CGPA: 8.65/10

Manipal, Karnataka
