PROFILE

Computer Science graduate with AI and software engineering internship experience building machine learning systems and user-facing software. Experience spans retail forecasting, computer vision, NLP research, enterprise workflow automation, and privacy-aware mobile products built with Python, SQL, TypeScript, React Native, and Supabase.

EXPERIENCE

AI Analyst Intern | Impact Analytics, Bengaluru

Jan 2026 - Present

- Build retail demand-forecasting and pricing datasets and models in Python and BigQuery SQL, including store clustering, baseline forecasts, seasonality, and elasticity across product hierarchies.
- Run SQL and Tableau QA checks, investigate missing or inconsistent data, and validate aggregated tables before they enter downstream forecasting workflows.

Software Engineering Intern | YES BANK, Mumbai

May 2025 - Jul 2025

- Led a three-person intern team through end-to-end testing of three enterprise platforms; documented 50+ defects and worked with developers to validate fixes across multi-step approval workflows.
- Built and improved SharePoint and Power Automate workflows, internal sites, and Power BI dashboards for operations and stakeholder reporting.

Machine Learning Engineer Intern | Alethe Labs, Gurugram

Dec 2024 - Jan 2025

- Developed a ResUNet model with multi-head attention for pixel-level corrosion condition segmentation across four severity classes; also evaluated unsupervised methods for transaction anomaly detection.

Undergraduate NLP Research Intern | Manipal Institute of Technology

Jun 2024 - Jul 2024

- Analyzed and visualized lyrical structure using BERT, Word2Vec, Doc2Vec, NLTK, Matplotlib, and Plotly, exploring how embeddings and transformer models capture recurring patterns.

SELECTED PROJECTS

NearHere | React Native, Expo, TypeScript, Supabase, PostGIS

Personal project

- Built an iOS MVP for nearby activity discovery with phone authentication, host and join flows, in-app chat, and a privacy model that shows approximate public locations while restricting exact meeting points.
- Backed client flows with RLS-protected RPCs, Supabase Realtime plus a bounded polling fallback, and 39 unit tests; verified lint, type checks, production bundling, and a native iOS Simulator build.

SetuAI | React, Node.js, PostgreSQL, Gemini OCR

SAP Hackfest 2025

- Built a role-based vendor compliance platform combining document OCR, government API validation, dashboards, and risk scoring; earned a special award after placing in the top five among 4,000 teams.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, SQL, Java, C, HTML, CSS

AI and data: PyTorch, TensorFlow, Hugging Face Transformers, BigQuery, Power BI, Tableau

Application development: React, React Native, Expo, Node.js, PostgreSQL, Supabase, PostGIS, Git

EDUCATION

Manipal Institute of Technology | BTech in Computer Science | CGPA 8.65

2022 - 2026
