Education

Manipal Institute of Technology **2022 – 2026**
Bachelor of Technology in Computer Science and Engineering; CGPA: 8.76/10 *Manipal, Karnataka*

Experience

AI Analyst **Jan 2026 – Present**
Impact Analytics *Bengaluru, Karnataka*

- Built and validated a pricing and demand-forecasting pipeline for a global luxury jewellery retailer across 13 geographic clusters, covering demand classification, baseline forecasting, seasonality, price elasticity, promotions, and sparse-data fallbacks.
- Automated QC and six forecast alerts; supported weekly restaurant forecasts, consumed model-selection API outputs, and shipped fixes through Git PRs. Tech stack: Python, BigQuery SQL, REST APIs (FastAPI-backed), Tableau, Git/Bitbucket.

Software Engineering Intern **May 2025 – Jul 2025**
YES BANK *Mumbai, Maharashtra*

- Built a responsive Next.js and TypeScript conversational interface with SSE-based token streaming.
- Architected JWT authentication, RBAC middleware, and a SQLite-backed governance layer for atomic bulk provisioning, concurrency-safe transactions, auditability, and rollback integrity.
- Led a three-person intern team through end-to-end QA of three enterprise platforms; built SharePoint sites, Power Automate workflows, and Power BI dashboards for operational reporting and stakeholder review.

Machine Learning Engineer Intern **Dec 2024 – Jan 2025**
Alethe Labs *Gurugram, Haryana*

- Developed a client-facing multi-head-attention ResUNet for four-class corrosion-condition segmentation of infrastructure imagery—severe corrosion, bad, fair, and background—and implemented unsupervised anomaly detection to identify suspicious patterns in unlabelled banking transactions.

Projects

- **SetuAI – AI-Powered Vendor Compliance Platform**: Built a React, Node.js, and PostgreSQL platform combining Gemini OCR, government API validation, role-based workflows, and risk scoring, reducing vendor onboarding time by approximately 70%.
- **Realtime Anomaly Engine**: Built an asynchronous FastAPI service using Redis Streams, PostgreSQL, WebSockets, and Docker to ingest validated metrics, score anomalies with a z-score cold start and Isolation Forest, persist flagged events, and stream live alerts.
- **LEDA – Local-First Personal AI and Agentic Computing System**: Built a private second brain with OpenClaw-powered agentic workflows, a TypeScript terminal coding agent that inspects local project files through validated tools, and a SwiftUI watchOS voice assistant that streams audio through a WebSocket bridge. Filesystem and audio operations remain local, with model calls limited to reasoning steps.

Technical Skills

Languages: Python, TypeScript, JavaScript, SQL, Swift, Java, C
Technologies/Frameworks: Azure OpenAI, BigQuery, PostgreSQL, SQLite, Redis Streams, FastAPI, Docker, PyTorch, TensorFlow, Next.js, React, Node.js, REST APIs, WebSockets, SSE, JWT, RBAC, Git, Tableau, Power BI, DBeaver, SharePoint, Power Automate

Leadership & Achievements

- **SAP Hackfest'25 – Special Award**: Ranked in the top five among 25,000 students and 4,000 teams across 20 state hubs for developing SetuAI.
- **IAESTE Manipal**: Served as an LC member and helped organize Namaste Manipal'23, a week-long flagship programme welcoming international interns.
